IMPORTANT NOTES: Premiums given are estimates only. They are based on two people (premiums are the total for the couple) – one aged 68 and partner aged 65, travelling to Spain for two weeks. Existing medical condition is that one person suffers from high blood pressure, has an ICD fitted and takes a statin to control Cholesterol. A total of 5 tablets are taken each day. Condition has been stable for the past year with no change in medication. Partner has no existing medical condition. Annual Multi Policy is for 'Europe' area only and each policy may differ as to the number of trips/days abroad in a year.

- Age Concern does not increase premiums for existing medical conditions – they increase the amount of excess on the policy – for the person with medical conditions listed above the excess was increased to £250 for the single trip or £300 for the Annual Multi Trip.
- LIVEWIRES GROUP has produced this leaflet for guidance only. We cannot recommend any particular insurance company nor have we covered all the companies in the market. Other matters such as additional medical conditions, undiagnosed illnesses, awaiting results, recent events etc. can significantly affect premiums rates.
